

JURGEN HALILI

AI Automation Engineer · Full-Stack Developer · D365 Business Central Developer

jurgenhalili1142@gmail.com · +355 68 58 33333 · Tirana, Albania (Open to Fully Remote) · linkedin.com/in/jurgen-halili-b227a6255 · jurgenhalili.dev

PROFESSIONAL SUMMARY

Software Engineer with 2+ years of experience spanning AI automation, full-stack development, and Microsoft Dynamics 365 Business Central. Currently building production-grade LLM-powered multi-agent systems, RAG pipelines, and enterprise automation workflows at a specialized AI company. As a freelance BC developer, delivered AL extensions, NAV → BC migrations, and OAuth2 API integrations across multiple industries. Strong troubleshooter with a track record of diagnosing complex issues, working directly with end users, and delivering clean, maintainable solutions under real-world conditions.

EXPERIENCE

Software Engineer — AI & Automation

NextGen Albania

July 2025 – Present

- Design and deploy multi-agent AI systems using LangChain, LlamaIndex, and Semantic Kernel — including memory management, tool orchestration, and reasoning engines integrated with enterprise platforms (CRM, ERP, HR, contact centre workflows).
- Build RAG pipelines for enterprise knowledge management using vector databases: Weaviate, Pinecone, Qdrant, and Milvus; enabling semantic search and intelligent document retrieval at scale.
- Integrate and fine-tune LLMs from OpenAI, Anthropic, Cohere, Meta, and Mistral into production-ready automation solutions, applying prompt engineering and context management best practices.
- Develop agentic workflow automation using n8n, Make, and Zapier — connecting APIs, databases, and SaaS platforms to eliminate manual processes across business functions.
- Build conversational AI applications spanning text, voice, and telephony using VAPI, ElevenLabs, Azure TTS, Whisper, and Deepgram; deployed in customer-facing and internal enterprise contexts.
- Contribute to proprietary modular AI architectures: developing reusable agent components and internal frameworks that improve scalability, maintainability, and cross-project reuse.
- Ensure responsible AI deployment — implementing monitoring, logging, and compliance with SOC2 and GDPR standards.
- Develop full-stack features (MERN stack) supporting AI products: RESTful APIs, microservices, frontend interfaces, and database layers.

Freelance BC Developer & Full-Stack Engineer

Self-Employed

April 2024 – July 2025

- Delivered end-to-end D365 Business Central projects: NAV → BC migrations, custom AL extension development, and REST/JSON/OAuth2 API integrations for clients across retail, logistics, and services.
- Provided application support across BC modules — triaging issues, performing root cause analysis, and escalating complex problems with full diagnostic context to ensure minimal downtime for clients.
- Built OAuth2-based integrations connecting Business Central to external SaaS platforms, automating data synchronisation and eliminating manual data entry.
- Implemented automated testing frameworks for BC extensions, ensuring reliable deployments and maintainable codebases across client environments.
- Delivered full-stack web projects for SMEs using the MERN stack; managed client relationships and end-to-end technical delivery independently.

Software Developer Intern

BALFIN Group

Aug 2023 – Sep 2023

- Built and optimised REST APIs using Python and Flask; managed relational databases and improved system efficiency across multiple internal projects.
- Identified and resolved production bugs; contributed to backend architecture improvements and database query optimisation.

ICT Specialist Intern

Intesa Sanpaolo Bank Albania

July 2023 – Aug 2023

- Maintained and updated database systems across all Albanian branches; resolved IT issues as a frontline ICT specialist.
- Applied Java and Spring Boot in a live banking environment; contributed to data warehousing tasks.

PERSONAL PROJECTS

Full case studies, screenshots, and the rest of the portfolio at jurgenhalili.dev.

advance.al — Albania's job marketplace (jobseekers, employers, admin). Embedding-ranked matching (OpenAI text-embedding-3-small + cosine + bilingual category boost), Express 5 + MongoDB backend with 288 Jest tests, React 18 + Mantine frontend, Playwright walker screenshots across desktop + iPhone + Pixel.

GymApp — White-label gym OS for the Albanian market with four deployables sharing one branding record (admin web, member app, API, NFC scanner-bridge). Socket.io + Redis fan live occupancy across PM2 workers; a node-hid scanner-bridge reads NFC taps off USB readers and POSTs to the API.

Ëndërrat e Mia — AI bedtime-story app for Albanian-speaking families. Three-step atomic pipeline (Claude Haiku narrative + fal.ai Flux watercolors + ElevenLabs TTS) and a unified Transaction ledger for credits, ads, subscriptions, and one-off purchases.

KeptItUp — Autonomous SRE agent monitoring six deploy platforms 24/7. Two-layer reasoning (tree-sitter AST walker for context + Reviewer agent gate); auto-PRs only at ≥85% confidence (or ≥70% with passing build verification). Three LLM providers behind a single budget-gated client.

BUSINESS CENTRAL EXPERTISE

- AL / Extensions development — custom pages, codeunits, tables, reports, and published APIs
- 1st, 2nd & 3rd line application support — issue triage, root cause analysis, user communication, and escalation
- NAV → Business Central migrations: data, customisations, configuration, and user onboarding
- SaaS deployment, environment management, and version upgrade support
- API integrations: REST, JSON, OAuth2, and webhooks connecting BC to external systems
- Automated testing for BC extensions; clean, maintainable, and well-documented codebases
- Module coverage: Finance, Sales, Purchase, Inventory, Warehouse

AI & AUTOMATION STACK

LLM Providers: OpenAI, Anthropic, Cohere, Meta (LLaMA), Mistral

Orchestration: LangChain, LlamaIndex, Semantic Kernel

Vector Databases: Weaviate, Pinecone, Qdrant, Milvus

Workflow Automation: n8n, Make (Integromat), Zapier

Voice / Conversational AI: VAPI, ElevenLabs, Azure TTS, Whisper, Deepgram

Patterns: RAG pipelines, multi-agent systems, memory management, tool orchestration

TECHNICAL SKILLS

ERP / BC: D365 Business Central, AL Language, Microsoft NAV, BC API

Full-Stack: MERN (MongoDB, Express, React, Node.js), HTML, CSS, RESTful APIs, Microservices

Languages: AL, JavaScript, TypeScript, Python, Java (Spring Boot), C, SQL

Databases: MySQL, MongoDB, MS SQL Server, vector databases (Weaviate, Pinecone, Qdrant)

Compliance: SOC2, GDPR — monitoring, logging, responsible AI deployment
Tools: Git, VS Code, Postman, Azure DevOps, BC Development Environment

EDUCATION

BSc Software Engineering — GPA 3.04 (Honours List)

Epoka University, Tirana

Oct 2021 – Jul 2024

- Awarded half-ride scholarship on academic merit.
- Active member of the Programmers Club and Google Developer Student Club.
- Certificate of contribution to the university's Database Management System.

German Language A2 — 100/100 Final Exam

CASA Bremen Sprachschule, Germany

Jul – Oct 2022

LANGUAGES

Albanian (Native) **English** (Fluent) **German** (Intermediate, B1)
